Good day to you.

Great to see your company is evolving. I am sure I can help with GoodData's upcoming challenges due to my experience in developing data analytics systems.

In my current position as full stack developer I covered all parts of soft product. Starting from gathering and storing data to developing UI using JavaScript+jQuery. In addition, for about 1,5 years I'm practicing in React/Angular.

Currently I'm looking for an interesting project to focus on front end. Your project is a perfect match for my personal and professional interests. So I'd be excited to join GoodData's team.

If you are interested I would welcome the chance to discuss details.

Thank you for your consideration,
Igor Berdnikov.

PS: as a full stack developer I have experience not only in UI and JavaScript but also in bunch of backend technologies.
